

Build trello website to management work

Tran Tien Dat

INTRODUCTION

Nowadays, people are increasingly busy with their work. With such a large workload, errors are inevitable. Therefore, I chose a task management application to help people manage their work more effectively

Results and Discussion

Managed users in the project, Created and managed project tasks, added deadlines and completion progress to the project, Sent authentication email if you want to create a user account new and forgotten passwords as well as adding user accounts to the project

FEATURE

- Create a project, add project tasks, divide project tasks by day, divide tasks during the day
- Set task expiration time, Update task progress
- Add members to the project

MATERIALS AND METHODS

- HTML, CSS, JAVASCRIPT, JQUERY
- ReactJs
- NestJs
- MYSQL

CONCLUSION

I have built a work management website with an easy-to-use, friendly interface, Vietnamese language and basic functions that run correctly and the system runs stably. I hope my website will help. for everyone in the process of managing work and dividing tasks more easily. We hope that the work management application trello will become more and more popular in the future.
